

Skills:	Wow!!	Got It!	Almost There	Needs Help
Science Understanding	I used science ideas (movement, force, or energy) to explain how my door or scene works.	I included science ideas in part of my door or scene.	I tried to use science ideas, but they were unclear or didn't work.	I didn't show or explain any science in my design.
Engineering & Testing	I asked questions, planned, tested, and improved my door design to meet a need or solve a problem.	I helped create and test a working door with a clear idea and some changes.	I helped plan and build a door but didn't test or improve it much.	I didn't do much planning or needed help building or testing the door.
Reading & Speaking	I created a fun, descriptive story using clues from the book and added my own ideas with details.	I told a story with a beginning, middle, and end using book ideas.	I had a story, but it needed more details or connections to the book.	My story was hard to understand or missing big parts.
Writing	I wrote clearly with great word choice and explained what's behind the door using facts or a creative story.	I wrote a full story or explanation with some good details.	I wrote something, but it needs more work or organization.	I didn't write much or my writing was off-topic.
Math and Measuring	I measured carefully and used math (angles, area, shape, graphing) to build and test my door.	I used some math to help make my door or scene.	I used a little math, but not always correctly.	I didn't use math tools or measurements in my project.
Computer Science	I created or helped write	I tested or used a	I tried coding or tech but	I didn't use technology

and Coding	a program to open my door or move a scene, and explained how it works.	simple code or motor to help the door move.	it didn't fully work.	or coding in my design.
Creativity & Design	My scene behind the door is colorful, fun, and full of mystery or surprise!	My scene is creative and fits the story.	My scene is simple and needs more details.	I didn't finish the scene or it didn't match the story.
Teamwork	I worked well with my team, shared ideas, and helped others. I presented my project with confidence.	I shared ideas and worked with my team most of the time.	I needed reminders to stay on task with my group.	I had trouble working with others or staying on task.
